PCT/IB2004/050786

Box No. IV Text of the abstract (Continuation of item 5 of the first sheet)

Devices (1) comprising antenna (2-4 or 2,3,5) for receiving radio frequency sign als are provided with first conductor (2) for receiving the radio frequency sign als and for converting the radio frequency signals into electromagnetic fields a nd second conductor (3) for receiving at least a part of the electromagnetic fields and for converting the received electromagnetic fields into input signals. The second conductor (3) are coupled to radio frequency circuits (10) for process ing the input signals. The resonant frequencies of these antennas (2-4 or 2,3,5) can be selected by designing the dimensions of the second conductor (3) and the ir positions with respect to the first conductor (2). The radio frequency circuits (10) comprise antenna diversity units (20) coupled to the second conductors (3) and to third conductors (4,5). The third conductor (4) mainly receive the electromagnetic fields, or the third conductor (5) mainly receive the radio frequency signals. The devices (1) comprise wireless headphones.
